

Just one interface for your entire logistics chain

Truck24 FleetExplorer

Fleet Explorer is an innovative Web-based logistics platform and lies at the heart of the TruckSmart and TruckInteractive Telematics solutions from Truck24.

All partners involved in the transport process are integrated into a homogeneous interface by means of Fleet Explorer. Various vehicle terminal devices as well as ERP and distribution systems are connected through just one interface. In addition, within one company, mixed operation using different Truck24 AG hardware platforms is possible. Your partners can also be integrated into your company environment via partner portals. Only in this way can the logistics chain be closed without breaks and made clearly visible for you at any time.

TruckTalk

A standard interface exists to all the most common distribution or ERP systems, allowing optimum integration into your business processes.

Technologies

The latest technologies, and a modular structure, allow you to put together your own individual software solution. Moreover, Truck24 Fleet Explorer offers in-depth European map materials down to street level. Differing objects, such as trucks, vans, ships or valuable cargo can be managed from just one platform.

Independence

Truck24 gives you the freedom to schedule your fleet wherever it is in the world. The Truck24 Fleet Explorer runs on any PC and, because of its technological structure, requires no installation. You can therefore access your fleet at any time from your home base or while on the road.

Languages

The Truck24 Fleet Explorer is available in the following languages: German, English, French, Dutch, Italian, Czech and Polish. Further languages are in preparation.

Map materials

The licences for the Fleet Explorer and the entire European map materials are provided for an unlimited number of workplaces for each Truck24 service you select, without additional cost.

Management

You are provided with numerous settings possibilities for your FleetExplorer. You may modify these yourself at any time.

Varying devices

You can run the entire palette of Truck24 services in one portal, thus giving you the correct and least expensive solution for any requirement.

Partner portals

By using partner portals, you can include shippers, recipients or subcontractors into your company solution at any time. Depending on the authorisation levels assigned by you, each participant can access status information concerning the tour or the order. In addition, the positions of the vehicles are displayed. Due to a new type of rights concept, you can independently manage or make available this exchange of information at any time.

Supply chain event tools

You can proactively inform all participants about the status of the individual transport processes by using the various information components. This information is forwarded by mail or SMS to as many recipients as you wish. Furthermore, this makes the monitoring of your own vehicles while on the road simple.
